### **Errata to Section 2. Geological Setting** (p. 20, right column, lines 6-10):

The mid to latest Famennian Cabeças Formation (Melo and Loboziak, 2003 and references therein), which reaches here its maximum thickness, disconformably overlies the Pimenteira Formation and the so-called “Passagem Member” of the former rock unit (actually a sandy facies lateral to the Pimenteira Formation, restricted to the northeastern margin of the Parnaíba Basin).

### **Complement to Section 4. Systematic Paleontology** (p. 27, left column, under entry Paratype):

Repository for the slide collections: Departamento de Geologia – Instituto de Geociências da Universidade Federal do Rio de Janeiro (IGEO/UFRJ).

### **Addendum to Acknowledgements** (p. 28, left column):

Thanks are also due to Prof. Leonardo Borghi, IGEO/UFRJ (Rio de Janeiro, Brazil), for access to the slides; to 4º Distrito do DNPM (Recife, Brazil) for sampling permission; and to the Biostratigraphy Management of Petrobras R&D Centre (CENPES/PDGEO/BPA, Rio de Janeiro, Brazil) for the palynological processment of the core samples.
